READY *to* EAT CALIFORNIA FRUIT
SUMMERIPE®

YELLOW PEACH

A luscious, juicy peach is one of summer's ultimate pleasures. The golden flesh of the yellow peach is slightly acidic, with a tartness that mellows as the peach ripens and softens. Try our peach salsa recipe and experience one of the many pleasures of the peach!

SUMMERIPE CONDITIONING PROGRAM

WHY CONDITIONING IS BETTER

Summeripe has a passion for high quality and has its own Quality Control staff to monitor fruit standards. Once the fruit has been inspected for quality and packed in boxes, the fruit is then sent to summeripe's state-of-the art pre-conditioning facility. This facility simulates mother nature's environment by controlling temperature and humidity to let the Fruit ripen naturally. There are no chemicals, synthetics, or anything unnatural involved in this process. Through years of research, our staff has determined the correct amount of humidity, temperature, and airflow to make the fruit think it's still attached to a tree in an orchard.

HEALTH BENEFITS
