How to ensure you have the products you need to create a safe and clean environment for your facility, your team members and your guests

- General Guidelines for Sanitation
- High-Touch Areas to be Sanitized Frequently
- Products to use for Sanitation
How is COVID-19 spread?
COVID-19 is spread when someone with the virus contacts another through respiratory droplets via coughs and sneezes.

How is it prevented?
- When coughing or sneezing, cover your nose and mouth with a tissue or a flexed elbow.
- Frequently wash your hands with soap and warm water for a minimum of 20 seconds, or an alcohol-based hand rub.
- Practice social distancing with anyone who has cold or flu-like symptoms.

Can coronavirus survive on dishware cutlery?
Normal washing of dishes in hot water (or better still, a dishwasher) using detergent is likely to completely inactivate any coronavirus present.

GUIDELINES FOR SANITATION

KITCHEN AND BACK OF HOUSE
- Provide alcohol-based hand sanitizer stations.
- Increase cleaning and disinfecting frequency for high-touch surfaces.

RESTROOMS
- Clean and disinfect restrooms often.
- Provide alcohol-based hand sanitizer stations outside the restroom.

TO-GO PICK UP AREA
- Provide alcohol-based hand sanitizer stations.
- Increase cleaning and disinfecting frequency for high-touch surfaces.

Put your customers at ease and help gain consumer confidence by implementing a best in class sanitation protocols.
Restaurants include many high-touch point areas. It is suspected that the COVID-19 virus can live on surfaces for several days. Developing a protocol that includes regular disinfecting of high-touch areas is key to maintaining a healthy staff and inspiring consumer confidence with your guests. Be sure to socialize what your establishment is doing to keep everyone safe.
